

# Search Help for GENDER

I received an email from one of the course students asking how to setup search help for the GENDER field.

I thought I covered this in the videos but alas, I didn't!

## So, how do we setup the search help for Gender?

This is an easy one. We need to edit the Domain used for the Gender field. Edit the 3rd tab titled "Value Range" and enter 3 records in the "Single Vals" area.

Fix. Val.	Short Descript.
U	Unknown
M	Male
F	Female

Once you activate the domain your search help will be activate and a drop-down list will appear when viewing or entering data.
