

MM0002 MM Organization Structure - v1.0

Capgemini

This In-house course was developed to meet the needs of SAP R/3 Consultants working at Capgemini. This course is designed to present a high level view of Materials Management Organization Structure and to provide the Consultants with basic information about how to use this Functionality.

More in-depth courses have been developed to train Consultants in specific areas discussed during this course.

Your comments at the conclusion of this training session are appreciated and will help us better tailor future courses to meet your training needs.

Course Objective

- Become familiar with SAP Organization Levels in Procurement Process.
- Definition Of Organizational units in SAP - Organization, Client, Company Code, Plant, Purchasing Organization, Storage Location, Purchasing Group.
- Assignment Of Organizational units in SAP.
- Creation & Assignment Of Organizational units in SAP.
- Case Study & Exercise.
- Tips & Tricks
- Test Your Knowledge

Organization...?

- An organization is a social arrangement which pursues collective goals, which controls its own performance, and which has a boundary separating it from its environment.

- The word itself is derived from the Greek word *organon* meaning *tool*.

Capgemini

•An enterprise operates within a diverse environment consisting of multiple influencing factors. For example no enterprise can overlook the statutory reporting requirements to satisfy the legal authorities or afford to not respond to its customers' needs.

•Hence the need for creating specialized task force of groups of people, to deal with the external factors. This grouping of people into specialized areas, all equipped with their own systems, is called as Organization.

Purpose

FINANCE

PURCHASE

INVENTORY

Organization Structure

PLANNING &
PRODUCTION

SALES &
DISTRIBUTION

- An organizational structure depicts the structure of an organization in terms of relationships among personnel or departments.
- An organizational chart also represents lines of authority and responsibility.
- An organizational chart indicates the formal structure of a business or company.

Use

- Organization is a Group of people with specific responsibilities acting together for achieving specific purpose determined by the organization.
- Any organization needs proper co-ordination within all its departments.
- Link between departments is maintained in form of a hierarchy.
- Organizational Structure facilitates proper flow of information, division of responsibilities & effective reporting.

A logical hierarchy is called as an Organisational Structure.

Challenges

Large Business houses need a specialized work force to focus on specific areas

of Business. Different units within an Organization operate in different environments and hence develop their own specialized knowledge base, procedures, tools & techniques and policies.

- It is a challenge to create a hierarchical structure that will cater to the needs of individual units yet integrate the effort to meet the common objectives of the Organization as a whole.
- In any Business, it becomes increasingly difficult to ensure proper coordination, proper exchange of information, ability to react quickly and collate information required to form a big picture if the organization structure is too complex or too layered.
- A balanced and simple structure can optimize this need for autonomy for various units and coordinate the efforts effectively.

SAP Organization Unit

SAP Organizational Levels in Procurement Process

Client

Company code

Plant

Storage location

**Purchasing organization/
purchasing group**

- In the SAP system, organizational levels are structures that represent the legal or organizational views of a company.
- The determination of the organizational levels is an important work step in the project. In fact, it is an essential prerequisite for all subsequent activities.
- The organizational levels are defined and assigned in Customizing for the *enterprise structure*.

Capgemini

- This level contains the data applicable to all individual group companies, all plants, and all warehouses/stores belonging to an enterprise (corporate group).
- Examples of material data that is valid client-wide are the material group, the short text description of a material, the storage conditions (temperature range, whether the material is explosive or perishable, and so on), and the purchase order text.

SAP - Organization Unit

- **Client**

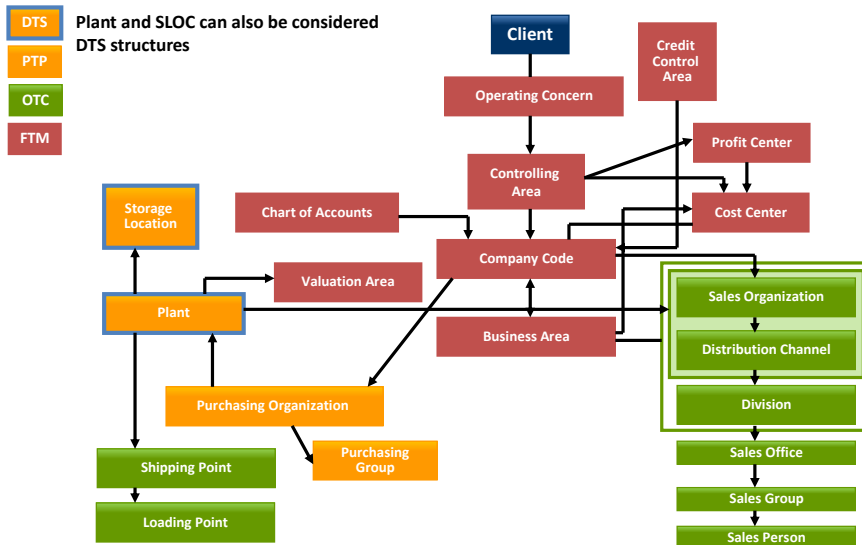

- The **client is a unit within an SAP system that is self-contained both in legal** and organizational terms and in terms of data, with separate master records and an independent set of tables.
- From a business viewpoint, the client represents a corporate group, for example.
- It is the highest hierarchical level of Organizational unit, with its own data, master records and set of tables.
- A client is uniquely defined in the system by a three-digit numeric key.
- Examples for Client specific data:
 - Application data: Business transaction data and Material Master data.
 - User Master data: Authorization and User Groups .

Capgemini

- This level contains the data applicable to all individual group companies, all plants, and all warehouses/stores belonging to an enterprise (corporate group).
- Examples of material data that is valid client-wide are the material group, the short text description of a material, the storage conditions (temperature range, whether the material is explosive or perishable, and so on), and the purchase order text.

The SAP Organization Structure Covers all Functional Areas...

SAP - Organization Unit

Company Code

•The company code is the smallest organizational unit of external accounting for which a complete, self-contained bookkeeping system can be replicated.

•This includes the entry of all events that require posting to the accounts and the creation of a complete audit trail for balance sheets and profit and loss statements. A company code represents an independent unit producing its own balance sheet, for example, a company within a corporate group (client). Therefore, a company code is the minimum structure necessary in R/3 FI.

•In an international business, operations are often scattered across numerous countries. Since most government & tax authorities require the registration of a legal entity for every company, a separate Company code is usually established per country.

•A company code is defined in the system by means of a four-character alphanumeric key that is unique in the client.

Capgemini

Applications:

- Balance Sheet & Profit & Loss statement.
- Transfers financial Information to Controlling
- Material Valuation
- User Level Authorization
- Output Type determination

SAP - Organization Unit

Purchasing Organization

- The Purchasing Organization is an organizational unit within Logistics that subdivides the enterprise according to purchasing requirements.
- Procures materials or services, negotiates conditions of purchase with vendors, and assumes responsibility for these transactions.
- Responsible for all types of Purchase, right from creation of RFQ to Purchase Order.
- Purchasing Organization can play a role of Centralized Purchasing, Company Specific Purchasing or Plant Specific Purchasing.
- Own Info records, conditions for pricing and Vendor Masters.
- Negotiates conditions for purchase (price) with Vendors and with other plants.
- Serves as selection criterion for list of all purchasing documents and it is the highest level of aggregation (after client) for Purchasing statistics.
- Authorization to process various Purchase transaction can be controlled through Purchasing Organization

Applications

- Controls pricing conditions.
- Approval of Purchase document
- Output determination
- Master data
- User authorization

SAP - Organization Unit

Purchase Group

Purchasing Group is a key for a buyer or group of buyers responsible for certain

Purchasing activities.

The Purchasing group is:

- Internally responsible for the procurement of a material or a class of materials.
- The principal channel for a company's dealings with its Vendors

Purchasing Group is mainly used for reporting purpose. It can be also used for controlling the approval (release strategy) of various Purchasing documents.

Purchasing group can also control the authorization for processing various purchasing transactions.

Applications

- Reporting
- Output Determination
- Approval of Purchase document
- User authorization

SAP - Organization Unit

Plant

Plant is an organizational Logistics unit where certain important business functions like Production, Procurement, Inventory, Inbound & Outbound delivery processing, Plant Maintenance & Materials Planning are carried out.

Plant plays an important role in following areas

- Materials can be valued at Plant Level.
- A Factory Calendar is controlled at Plant Level
- Certain views like MRP, Purchasing... in the Material Master are maintained at Plant Level.
- User level authorization can be controlled at Plant Level.
- A plant is defined in the system by means of a four-character alphanumeric key that is unique in the client.

A plant may represent a variety of entities within a firm, such as:

- . Production facility
- . Distribution center
- . Regional sales office
- . Corporate headquarters
- . Maintenance location

Applications:

- Material Valuation
- Master data maintenance
- User Level Authorization
- Output Type determination

SAP - Organization Unit

Storage Location

The Storage Location is an organizational unit that allows the differentiation of material stocks within a plant. Storage Locations are only used for informative assignment. It can be used as a parameter criteria in reporting. Inventory is reported at storage location level. Thus at least one storage location is necessary for Inventory Management & delivery processing. However valuation can be only at plant (or higher) level. Storage Location has the following attributes

- Physical Inventory is carried out at Storage Location level
- Plant can have one or more Storage Locations
- A storage location is defined by means of a four-character alphanumeric key that is unique in the plant.

Applications

- Physical Inventory
- Reporting

Assignment of Org Units

Assignment of Organizational Units

In SAP R/3 you represent Organizational Structure as legal and logical representing the hierarchy of your company by assigning the organizational units which represent individual departments

This assignment forms the base for all Purchase activities in SAP, with out which no transaction can be executed

Also, it is generally necessary to interact with other organizational units such as Plants or Storage Location

Capgemini 

The enterprise structure is created through the assignment of organizational levels to each other.

Purchasing Organization

Centralized Purchasing

The concept of Centralized Purchasing is used when procurement is done centrally for all the plants irrespective of their locations. Central Purchasing helps to have a better bargaining power. The Central Purchase org. is assigned to all the Plants and need not be assigned to their respective Company Codes. The Plants assigned to Central Purchase Org. may or may not be assigned to another Purchasing Org.

Purchasing Organization

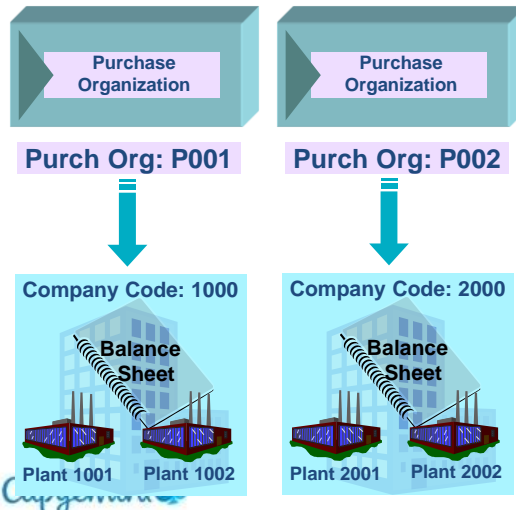

Plant-specific Purchasing

In Plant specific Purchasing, the Purchase Org assigned to Plant is only responsible for procurement of respective Plant. This concept is normally used to procure goods and services which are not economically viable to procure centrally. Such Purchase org. is only assigned to the Plants and are not assigned to there respective Company codes. The Plants assigned to such Purchase Org., may or may not be assigned to another Purchasing Org.

Purchasing Organization

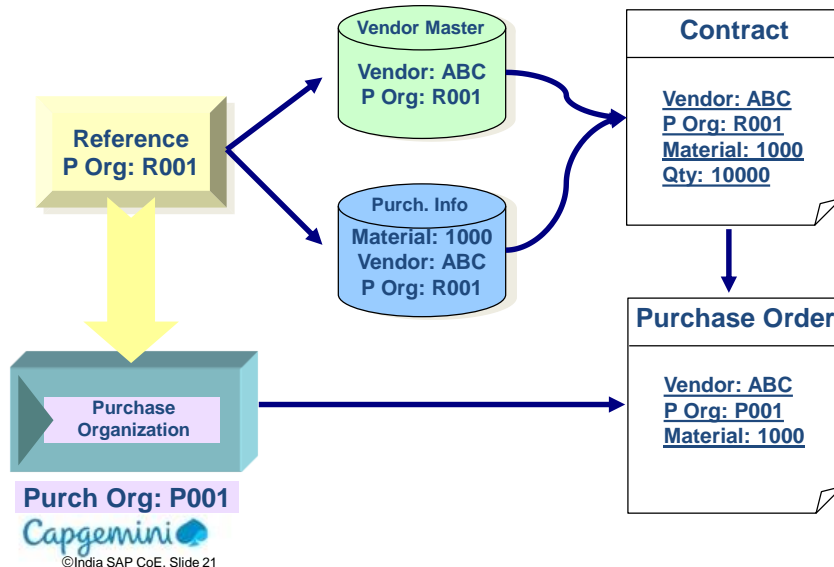

Company-specific Purchasing

In Company specific Purchasing, the Purchasing Organization assigned to the Company Code is responsible for procurement of all the plants assigned to that respective Company Code. This concept is normally used to procure goods and services which are not economically viable to procure centrally. Such Purchasing Organizations are assigned to all the Plants and also to the respective Company Codes. The Plants assigned to such a Purchasing Organization, may or may not be assigned to another Purchasing Organization.

Purchasing Organization

Reference Purchase Organization

Purchasing Organization

Reference Purchasing Organization

Reference Purchasing Organization is like a Central Purchasing Organization whose conditions or contracts, other Purchasing Organizations (linked to it) can use to procure materials & services.

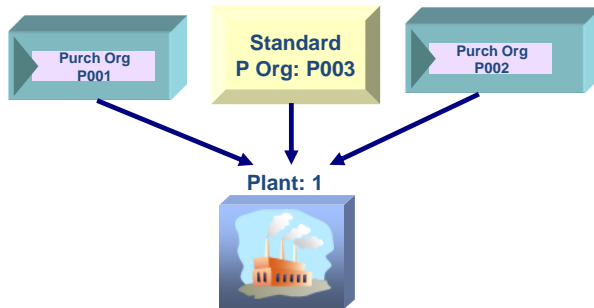

Reference Purchasing Organization gives a better bargaining power to other Purchasing Organizations (linked to it) as it is in a better position to negotiate a comprehensive Contract with favorable conditions.

It also saves time and effort in maintaining master data. The Vendor Master and Purchasing Info Record created with Ref. Purchasing Organization can be used by other Purchasing Organizations linked to it.

A Reference Purchasing Organization need not be assigned to any Company Code or Plant.

Purchasing Organization

Standard Purchasing Organization

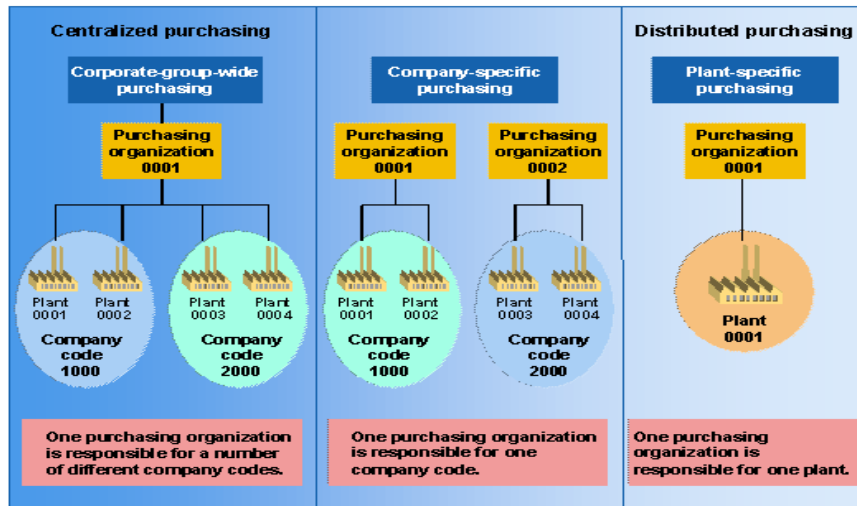

Standard Purchasing Organization is used in Pipeline procurement, Consignment and Stock Transfer process.

This helps when a single plant is assigned to many Purchasing Organization. In such a scenario one of the Purchasing Organization can be defined as Standard Purchasing Organization.

In case of Consignment and Stock transfer process, system does the source determination automatically with the help of Standard Purchase Org.

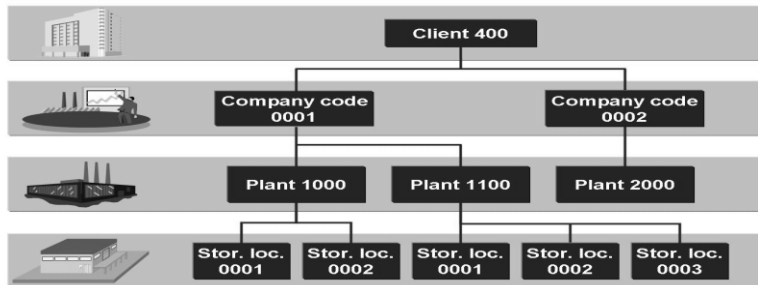

In case of Pipeline procurement Info record created for Standard Purchasing Org is used for issue of Material.

Purchase Organization Assignment Overview

Assignment of Organizational units in Inventory Management

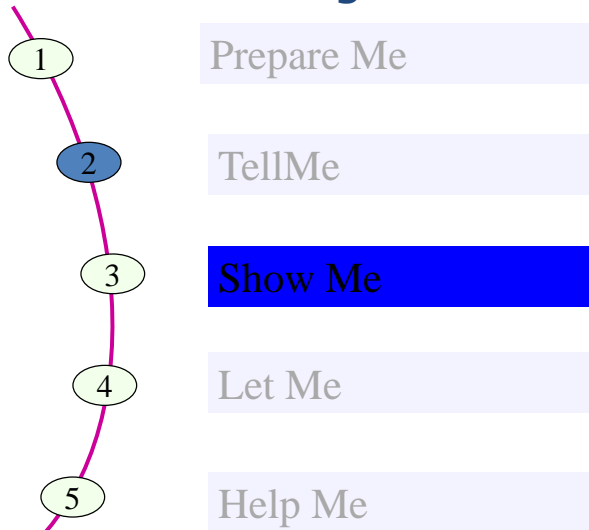

- The enterprise structure is created through the assignment of organizational levels to each other.
- A Client may therefore contain several Company Codes. In turn, a Company Code may contain several Plants.
- A Plant can only ever belong to one Company Code.

Organization for Inventory Management

- Plants are assigned to the Company Code. More than one Plant can be assigned to one Company Code. A Plant cannot be assigned to multiple Company Codes.
- Storage Locations are assigned to a Plant. Multiple Storage Locations can be assigned to a Plant.
- It is always recommended to create a new Company Code, Plant and Storage Location by copying it with reference to standard organization unit.
- Since the key of a Plant is unique in a Client, and a Plant can only belong to one Company Code, by specifying the plant, you simultaneously specify the Company Code.

MM0002 MM Organization Struct.

Agenda

Defining of Org Unit

Assignment of Org Unit

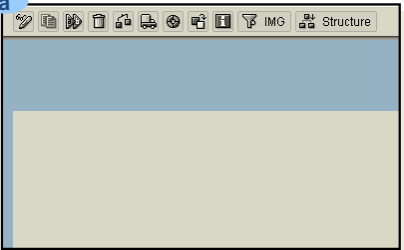

Define – Company Code

It is a 2 step procedure to create a Company Code

STEP 1

SPRO → Enterprise Structure → Definition → Financial Accounting → Edit, Copy, Delete, Check Company Code → Copy, delete, check company code

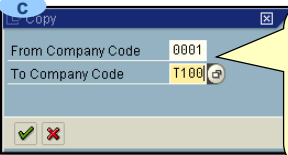

a

b

Press the icon  to create a new Company code with reference to an existing Comp Code.

c

In the Tab "From" enter the Comp code which is used as reference & in Tab "To" enter the new Comp code to be created

Capgemini

You can also directly access the Screen of creation of Company Code through T Code: **OX02**

When a Company Code is created by copying a reference Company code, system copies all the details like the Name, City, Country code, Currency and Language from the Reference Company Code used.

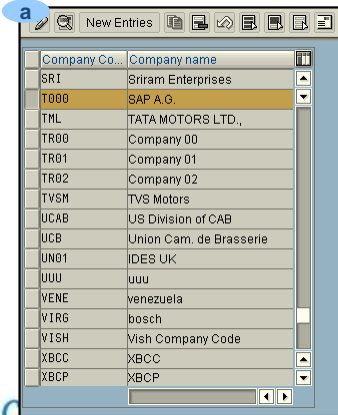

You need to change the details (if required) which is explained in the next slide STEP 2.

While creating a company code with reference, system prompts whether to create all the G&L accounts of reference company code. It also prompts whether to change the Currency code copied from the reference company code.

Define – Company Code

STEP 2

SPRO → Enterprise Structure → Definition → Financial Accounting → Edit, Copy, Delete, Check Company Code → Edit company code data

Select the Comp Code created and press icon  or via **Ctrl + Shift + F2** to view the Comp Code details.

You can also view the details the menu path Goto → Details

Comp Code can be created directly from this option, but it is not recommended since there are 613 Tables that needs to be updated for the Comp code to function. These tables are not updated fully if the Comp Code is not created with reference to an existing Comp Code.

Contd.....

You can also directly access the Screen of Edit Company code through T Code: **OX02**

Define – Company Code

Factory Calendar code, assigned to the Plant decides the total number of working days and also the public holidays applicable to the Plant. The information is later used by various departments. Example: during MRP run while calculating the processing time it takes into consideration the public holidays as per the Factory Calendar code assigned to the Plant.

Tax Code and Export business are determined by the Country Code maintained in the Plant Code.

Define – Storage Location

SPRO → Enterprise Structure → Definition → Materials Management → Maintain Storage Location

1 Determine Work Area: Entry

2 New Entries

3 Click to get the address tab.

Click to create a new Storage Location

You can maintain multiple addresses to a same Storage location through Sequential Storage location number

You can also directly access the Transaction through T Code: **OX09**

Storage location are always created for a plant. You may or may not maintain Address to the Storage Location.

For creating storage location, the minimum fields that needs to be updated are Plant code and Storage location code.

In Address Tab, Postal Code and Country are minimum fields which needs to be updated.

Define – Purchasing Organization

SPRO → Enterprise Structure → Definition → Materials Management → Maintain Purchase Organization

The screenshot shows the SAP SPRO transaction 'Define Purchasing Organization'. The table lists various purchasing organizations with their codes and descriptions. The 'New Entries' icon is visible in the top left corner of the table area.

From the Purchase Organizations assigned to a Plant, one Purchase org can be assigned as a Standard Purchase Organization.
One Purchase Organization can be assigned to Multiple Plants as a Standard Purchase Org.

You can also access the transaction through Trans Code: **OMKI**

Assignment – Purchase org - Ref Purch org

SPRO → Enterprise Structure → Assignment → Materials Management → Assign Purchasing Organization to reference Purchasing Organization

The screenshot shows the SAP SPRO configuration screen for assigning a purchasing organization to a reference purchasing organization. The interface includes a toolbar at the top with icons for 'New Entries', 'Save', 'Print', 'F4', 'F5', and 'F6'. Below the toolbar, there are two input fields: 'Purch. Organization' with the value 'T000' and 'Purch Org for Trg', and 'Reference purchasing org.' with the value 'T100' and 'Central P Org for Tr'. Below these fields, there are two sections: 'Allowed transactions' and 'Referenced data'. In the 'Allowed transactions' section, the checkbox for 'Release order' is checked. In the 'Referenced data' section, the checkbox for 'Conditions' is checked.

Purch. Organization	T000	Purch Org for Trg
Reference purchasing org.	T100	Central P Org for Tr

Allowed transactions

- ☒ Release order

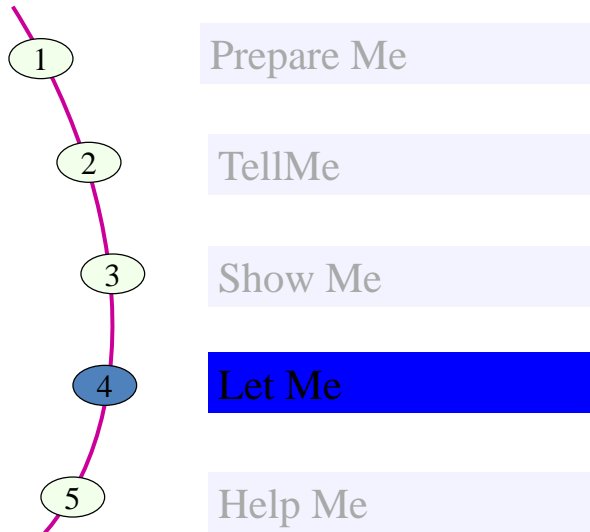

Referenced data

- ☒ Conditions

One Reference Purchase Organization can be assigned to multiple Purchasing Organization.

- Select "Release Order" if you want to allow release orders against Contract set up by the Reference Purchase Org.
- Select "Conditions" if you want to use conditions maintained for the Reference Purchase Org.

MM0002 MM Organization Struct.

Case Study

ABC Corporation has business setup in Germany and India with its head quarters

based in Frankfurt.

In Germany it has 2 manufacturing plants, one located in Darmstadt and the other in

Hamburg. Each manufacturing plant handles only 2 type of materials, stocked in

distinct locations. ABC Corporation also has one depot located in Darmstadt from

where it supplies material to its Whole sellers.

In India, ABC Corporation has 1 manufacturing plant located in Gujarat and 1 depot

in Mumbai. Manufacturing Plant handles only 2 type of materials, stocked in distinct

locations.

There is a Purchasing department located in head quarter who centrally procures

materials for all the plants located in Germany and India.

Case Study

There are also separate purchasing department located in India & Germany who is responsible for plant specific procurement. The strength of the each purchasing department is 2 employee, who are responsible to negotiate and deal with Vendors.

You need to map the organization structure of ABC Corporation in SAP

Exercise

- Create 2 Company Codes each for India and Germany
- Create 3 Plants codes (2 manufacturing unit and 1 Depot) and assign to the company code created for Germany.
- Create 2 Plants codes (1 manufacturing unit and 1 Depot) and assign to the company code created for India.
- Create 8 Storage Locations. 2 each for manufacturing plants and 1 each for the Depots.
- Create Central Purchasing Org and assign to all the manufacturing plant located in India and Germany.
- Create 2 Purchasing Org and assign each to respective plants located in India and Germany.
- Create 6 Purchasing groups (2 for each Purchasing Org).

MM0002 MM Organization Structure

Tips and Tricks

Transaction Code can be viewed in SPRO by using the following path
Display IMG(SPRO)→ Additional Information→ Additional
Information → Display Key→ IMG Activity.

From the main menu select Additional information → Display key →
Attributes.

The last 4 characters of attributes forms the Trans code.

You can display the Total tables affected by company code in the company
code creation screen from main menu Extras → Associated Tables.

You can also display the tables affected by Plant code in the plant code
creation screen from main menu Extras → Associated Tables.

You can use the F1 field help (icon on screen or function key F1 on
keyboard) to display possible entries for this field.

By pressing the F4 key, you get information on possible input values.
Alternately, you can click the pushbutton directly to the right of a
selected field to invoke the input help for that field.

Additional Information

The definition of organization units is a fundamental step in your project. It is a critical factor in how the project will be structured. You should not use more organization units than necessary. Once you have decided on an organizational structure it is not easy to change it.

In order to simplify master record and document entry, the organizational units can be stored as user parameters in the user master record. It is not necessary to specify the organizational units since the values are proposed automatically.

The following are examples of IDs defined for user parameters:

- WRK – Plant
- EKO – Purchase Organization
- EKG – Purchase Group

Test Your Knowledge

1. Which statements apply to a client in an SAP system?

Choose the correct answer(s).

- ☐ A A Client forms a completely independent business unit.
- ☐ B A Client has its own database.
- ☐ C A Client corresponds with a customer.
- ☐ D A Client can represent an entire company.

2. You can use the F1 key to ...

Choose the correct answer(s).

- ☐ A Obtain an explanation of the meaning/significance of a field
- ☐ B View a list of possible entries
- ☐ C Change your user data (such as the logon language)
- ☐ D Exit the current session
- ☐ E Obtain technical details relating to a field

Test Your Knowledge

3. You use the F4 key to ...

Choose the correct answer(s).

- ☐ A Open a new session
- ☐ B Obtain technical details relating to a program
- ☐ C Call up the SAP Library
- ☐ D Obtain a list of possible entries for an input field
- ☐ E Generate a print request for the current screen

4. A Plant can be assigned to several Company Codes.

Determine whether this statement is true or false.

- ☐ True
- ☐ False

Test Your Knowledge

5. A Purchasing Organization can act for several Plants.

Determine whether this statement is true or false.

- ☐ True
- ☐ False

6. A Purchasing Group must always be assigned to a Purchasing Organization.

Determine whether this statement is true or false.

- ☐ True
- ☐ False

7. A Purchasing Organization must always be assigned to a Company Code.

Determine whether this statement is true or false.

- ☐ True
- ☐ False
