

## Production Planning

### Lesson 4: Demand Management Overview

## Lesson Objectives

- Objectives -On successful completion of this training module, you should have:
  - Understood the basics of Demand Management
  - Become familiar with PP Planning Strategy
  - Become familiar with Categories of Planning Strategies
  - Become familiar with Consumption Modes
  - Become familiar with Planned Independent Requirement (PIR)

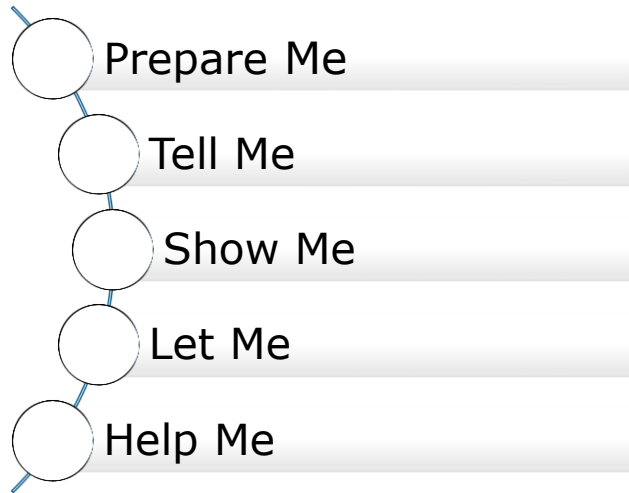

## Training Agenda

- PP Demand Management Overview
- PP Planning Strategy (MTO, MTS, Final Assembly)
- PP Categories of Planning Strategies
- PP Consumption Modes
- PP Planned Independent Requirement (PIR)

5

## Prepare Me

Add instructor notes here.

- Demand management is the link between top-level requirements planning (SOP) and the material planning (MPS and/or MRP).
- Demand management determines the requirement dates and quantities of the materials we are planning.

© 2018 Capgemini. All rights reserved.

6

## Purpose

- The function of Demand Management is to determine requirement quantities and delivery dates for finished products assemblies.
- Customer requirements are created in sales order management. To create a demand program, Demand Management uses planned independent requirements and customer requirements.
- Planning strategies represent the methods of production for planning and manufacturing or procuring a product.

Add instructor notes here.

## Use

- To create the demand program, we must define the planning strategy for a product.
- Using planning strategies, we can decide if production is triggered by sales orders (make-to-order production), or if it is not triggered by sales orders (make-to-stock production).
- We can have sales orders and stock orders in the demand program.
- If the production time is long in relation to the standard market delivery time, we can produce the product or certain assemblies before there are sales orders. In this case, sales quantities are planned, for example, with the aid of a sales forecast.

## Essentials

The followings are to be taken care before creating Demand

- Strategy group and required consumption mode fields needs to be defined in the Material master.
- SAP defined data, should not be deleted or modified directly. If required can be copied and renamed to suit the application.

## Planning Strategy

Planning strategies represent the business procedures for the planning of production qty and dates. SAP offers a large number of different options ranging from pure make-to-order production to make-to-stock production

Add instructor notes here.

## Categories of Planning Strategies

### •Make-to-stock production

To achieve smooth production load even if demand varies  
Planning is carried out using independent requirements

Net requirement  
planning - 10

Planning with final  
assembly - 40

### •Make-to-order production

Make to order  
production - 20

Planning without  
final assembly - 50

## Planned Independent requirements

- Planned independent requirements are used to perform Demand Management functions
- A planned independent requirement contains one planned quantity and one date, or one planned quantity split over time according to dates.
- Input for the demand program can come from several sources:
  - The demand plan from APO-DP
  - Manual entry
